

Greenhithe Electrical Services Ltd

Fire Safety

Regular fire alarm servicing is the only way of knowing, for sure, that your fire alarm system is fully-operational so you can depend on it functioning correctly when you need it most. Plus, it's a legal and regulatory requirement to ensure your fire alarm system is in good working order and complies with the current standards.

One of our trained engineers will attend at a time to suit you in order to carry out a full service of your system in accordance with BS5839-1. Should you ever have an issue that requires an urgent engineer visit, we will have someone on site very quickly.

No Tied in Fire Alarm contract

Best of all, as with all our maintenance, you're not tied into a contract. We can carry out fire alarm maintenance as you decide, which is generally every six months.

We're able to service fire detection systems of any size and type, and can attend shops and offices, schools and colleges, care homes and hospitals, factories and warehouses, public buildings, village halls, churches, HMOs and anywhere else we're needed.

Currently, we're able to offer fire alarm servicing in London and surrounding areas.

Please Note

In order for GES to maintain your existing alarm servicing, we will need to carry out a full-system service on the first visit. This is to ensure there are no previous faults on the system so we can be sure you're fully protected. But don't worry, even though it takes longer, it won't cost more.

Consider having your fire alarm, emergency lighting and Electrical Installation serviced all in one visit to minimise disruption. Contact us for a special price if you want all services carried out together.

How to calculate your price

Unlike many who claim to maintain fire alarm systems, we're completely upfront and transparent about our prices. You'll be hard-pushed to find better value.

Our prices are based on the number of "trigger devices" installed on your system. These are an item that can trigger the alarm to activate, such as the panel, smoke detectors and manual call points. It does not include sounders and beacons.

| Number of devices in system | Cost including attendance |
|-----------------------------|--------------------------------|
| 1-10 Devices | £98.99 ex VAT |
| 11 - 20 Devices | £118.99 ex VAT |
| 21 - 40 Devices | £158.99 ex VAT |
| 41 - 80 Devices | £228.99 ex VAT |
| 80 - 120 Devices | £298.99 ex VAT |
| 120+ devices | A site visit would be required |

An hourly charge of £60 + VAT will be charged for additional work required, as well as the cost of any parts which need replacing.

What Happens in case of an emergency?

After we've completed our first service, we will attach a sticker to your fire alarm panel and relevant paperwork with our Out of Hours Freephone number. Should you have any issues, one of our experienced technicians will try and assist you over the phone, for free. However, if the fault cannot be resolved then an engineer will arrange to visit your premises as quickly as possible. Emergency visits are charged as follows:

| Time of attendance | First Hour inc call out | Hourly rate |
|--------------------------------|-------------------------|-------------|
| Monday - Friday 0900 - 1700 | £110 ex VAT | £60 ex VAT |
| Outside of Office Hours | £165 ex VAT | £90 ex VAT |

Please contact us for a personalised quote if you require any other fire alarm services, such as installation or fault-finding.

Handy information to send to GES

While optional, providing the following details will enable our team to tailor the most precise quote and enhance our ability to deliver exceptional service.

Fire risk assessment

What your building insurance requires the category of protection from fire

Fire alarm cause and effect document

Fire zone map

Fire log book

Photos of fire alarm control panel and detector type
